

Andrew Finnigan Works

Regarding Finish/Finish Maintenance:

Unless otherwise noted or discussed, all work is finished with OSMO products. OSMO is a nontoxic, natural oil/wax blend and is intended for indoor use. It is a durable product resistant to water, dirt, and fluids. The finish does not require any ongoing reapplication or special treatment.

The finish should not be cleaned with bleach, ammonia, vinegar, furniture polish/cleaner, etc. Doing so may damage the piece. Fluids, spills, condensation, etc should not be allowed to pool on the work for long portions of time as prolonged exposure may leave watermarks. Should the work require a heavy cleaning, OSMO cleaning products should be used in accordance with their directions.

Any leather used is English Bridle. The leather is fully finished and does not require any additional treatment. Avoid spilling water/fluids on the leather to prevent potential staining. If the leather requires cleaning, an appropriate gentle leather cleaner should be used.
